# ENVIRONMENTAL MANAGEMENT Policy

MULTILOG

RESPECT  
FOR THE  
ENVIRONMENT

## **MULTILOG ENVIRONMENTAL MANAGEMENT POLICY**

As recommended by our Sustainable Management Policy, Multilog is committed to ensuring that environmental conservation is a premise of the results achieved by its businesses. In order to strengthen this commitment, this Environmental Policy sets forth guidelines on the subject, applicable to all our operations.

### **LEGAL COMPLIANCE**

Aligned with the guidelines of our Code of Conduct, Multilog seeks to ensure full compliance with the environmental legislation applicable to the business. In this sense, we are committed to identifying relevant environmental aspects and impacts, by properly managing the risks inherent to its operations. Based on an ethical and transparent relationship with the institutions responsible for overseeing compliance with our legal obligations, we work with a focus on preventing and reducing negative impacts and, whenever possible, on enhancing positive effects on the ecosystem.

### **URGE TO ENGAGEMENT**

Multilog shares with its various stakeholders the responsibility for preserving the environment and the planet's climate. Internally, this is reflected in training, campaigns and educational projects, reinforcing respect for the environment as an essential value of our corporate culture. Externally, the Company seeks to engage customers, suppliers, local communities and other stakeholders in the dissemination of good environmental practices.

### **IMPROVED PERFORMANCE**

To ensure the increasingly efficient use of natural resources, as well as the mitigation of the impact of its activities on the

environment, Multilog is committed to defining and monitoring environmental indicators in all its operating units. The critical analysis of these indicators, carried out by the technical teams responsible and shared with the ESG Committee, seeks to ensure the continuous improvement of environmental performance, in addition to alignment with the requirements established by our customers.

## **INNOVATION AND COOPERATION**

At Multilog, overcoming environmental challenges involves developing innovative solutions. Thus, the Company encourages its employees to propose ideas and initiatives aimed at increasing the eco-efficiency of our operations, in addition to seeking external partnerships, of a technical nature, for the development of projects that allow us to improve our environmental performance.
